telling the fascinating stories of copernicus kepler galileo newton and pascal charles e hummel provides a historical perspective on the relationship between science and christianity

men and women embarking on the study of systematic theology quickly find themselves awash in a sea of unfamiliar theological terms historical names and philosophical isms the survivor s guide to theology is both a life preserver to help stay afloat and a compass to help navigate these often unfamiliar waters while many books on systematic theology provide introductory material still the reader is often forced to dive right into actual theology without adequate framework for understanding resources for building this framework are available but scattered this unique book brings them together in one place the survivor s guide to theology is ideal for both introduction and review reference the first part deals with the question what is theology it addresses issues categories theory of knowledge and more the second part surveys nine major theological systems for each the author provides history and background overview of content and theological distinctive and a critique the final part provides the reader with biographical sketches of significant theologians a brief dictionary of common theological terms and an annotated bibliography of

major theological works

does neuroscience show that all our ideas about law and ethics are false david opderbeck answers this question with a broad and deep survey of the relationship between theology science and ethics he proposes that christian theology which narrates the humanity and divinity of christ in conversation with the new aristotelianism in the philosophy of science provides a path through secular and religious fundamentalisms alike

religion has influenced the development of science over the past two millennia the truth about science and religion tells the story of their interaction the book examines the origin of the universe evolutionary processes christian beliefs the history of science what being human really means and what science and religion have to say about these ideas the truth about science and religion is designed to help explore personal views on science and religion offering questions for discussion at the end of each chapter the book provides the historical and scientific background and the philosophical insight needed to think through issues of science and religion and their influences on personal beliefs metaphors analogies and comparisons are used to simplify complex topics so that any reader can engage with the key concepts unlike other books in this field the truth about science and religion follows a chronological scheme treating increasingly personal topics as the book moves through cosmology evolution the life of jesus and the lives of several great scientists to regain a unified view of science and religion in today s world

giordano bruno was burnt at the stake in rome in 1600 accused of heresy by the inquisition his life took him from italy to northern europe and england and finally to venice where he was arrested his six dialogues in

italian which today are considered a turning point towards the philosophy and science of the modern world were written during his visit to elizabethan london as a gentleman attendant to the french ambassador michel de castelnau he died refusing to recant views which he defined as philosophical rather than theological and for which he claimed liberty of expression the papers in this volume derive from a conference held in london to commemorate the 400th anniversary of bruno s death a number focus specifically on his experience in england while others look at the italian context of his thought and his impact upon others together they constitute a major new survey of the range of bruno s philosophical activity as well as evaluating his use of earlier cultural traditions and his influence on both contemporary and more modern themes and trends
