in this definitive study j d hunley traces the program s development from goddard s
early rockets and the german v 2 missile through the titan iva and the space shuttle
with a focus on space launch vehicles since these rockets often evolved from early
missiles he pays considerable attention to missile technology not as an end in itself
but as a contributor to launch vehicle technology focusing especially on the
engineering culture of the program hunley communicates this very human side of
technological development by means of anecdotes character sketches and case
studies of problems faced by rocket engineers he shows how such a highly
adaptive approach enabled the evolution of a hugely complicated technology that
was impressive but decidedly not rocket science unique in its single volume
coverage of the evolution of launch vehicle technology from 1926 to 1991 this
meticulously researched work will inform scholars and engineers interested in the
history of technology and innovation as well as those specializing in the history of
space flight
